XClutch Ford Mustang V8 Range

The 2018 on Ford Mustang utilises a different clutch from previous models. XClutch was one of the first in the world to develop a range of performance clutch upgrades for this application and completed an extensive research and development process in-house including road testing in the XClutch R&D Mustang. The lightweight alloy pressure plate kits have been designed to improve the shifting feel due to their decreased rotational inertia whilst the 270mm twin plate upgrade offers a silent type operation due to a strap driven intermediate plate and also offers a significant increase in torque holding capability.
